

OVERLAYS OR BACKERS FOR WOOD VENEER, PLYWOOD, PARTICLE BOARD, PAPER, FOAM, HONEYCOMB, ETC

Overlay and Backers Comparison Sheet

Many pre-coated with dry film adhesive. Products available in rolls or sheets. We will be happy to test any combination and provide a free lab report. Please contact us for further information.

*Separate spreadsheet available

In most cases above, the bonding strengths are a function of the following 5 components:

1. TEMPERATURE The temperature at the glue line should be checked with a "K" Thermo Couple Thermometer from Cole Palmer-(Catalog #91100-10) at www.colepalmer.com or call (800) 323-4340. In addition, you will need "K" type adapter plugs-(Catalog #93840-52) and a spool of very fine teflon coated wire-(Catalog #08541-02). Lenderink Technologies, Inc. will be happy to supply you with all of the above materials together for approximately \$250.00.

2. PRESSURE =
$$\frac{\text{Hydraulic Line Pressure (lbs)} \times \text{Surface Area of Cylinders (in}^2\text{)}}{\text{in}^2 \text{ of Material Being Pressed}}$$
 *Stacks or multiple pieces can be pressed at one time.

3. TIME When the glue line is at full temperature and pressure. Pressing time is often related to temperature and pressure. Higher temperature/pressure settings often allow for a shorter cycle time.

4. SURFACES Surfaces being bonded must be compatible with particular dry film adhesive being used. Surfaces must also have compatible energy and texture.

5. VAPOR/OFF GASSING Pre-press at full temperature and low pressure before adding Lenderink Dry Film Adhesive, i.e. vapors vacated from surfaces. Vapors cause bubbles and /or poor bonds. Moisture contents of wood should be below 8%, press breathing may be needed.

The above 5 components can be varied some and still provide good bonds. i.e. Temperature increase can often allow for pressure decrease and vice-versa. Extremely slick surfaces may have improved bonds if Corona Treated and sanded. Start as close to our recommendations as possible. Vary from the recommendations only one variable at a time. If any questions, please feel free to contact us.

Please send samples to our lab for adhesive recommendations so that we may test the material.
